

## What is Yelper?

Yelper is a tinder-style feature that matches users with food that are nearby their current location and other yelp users based on their swipes. It aims to **make deciding where to eat easier** and **connect yelp users together**.

## Why?

Yelper wants to solve two issues:

1. Difficulty of choosing a place to eat, especially if one is traveling and cant decide by reading Yelp reviews
2. Trouble of finding people to eat with and getting to know yelp users
